DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the

basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on

sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Moore

(459,044). The upper and lower valve bases are readable on elements a and b, respectively. Note

that the plurality of outlets is readable on the outlet opening in base "a" and the outlet pipe M

that is connected to the outlet opening in base "a". The slide block is readable on element p with

a guiding slot for receiving the degressive arc end G with an enlarged end at element 10. The ball

connect float rod is readable on elements 10 and H. Also, the float connecting rod and pivoting

rod is readable on element H. The sealing neck is readable on elements e and f and the pivoting

salient is readable on the portion of element M that receives element 9. Elements 14, 15, B and

C' are readable on the valve tappet. The water blocking cap is readable on elements t and 18 or

elements g, t, x, and 16-18 and the balance opening is readable on the openings or passages

through elements g and L.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's

disclosure.

Application/Control Number: 10/671,829
